CSS Code Explanation

This CSS code is used to style a personal portfolio website. Here's a breakdown of the main sections and their purposes:

1. Fonts and Variables:

- Uses Google Fonts to import the 'Poppins' font.

- Defines color variables for easy theme management (main-color, bg-color, text-color, etc).

2. Global Styles:

- Resets default margins, paddings, and applies a consistent font and transition.

- Custom scrollbar styling with colors.

3. Layout Basics:

- Uses responsive units like rem and percentages for flexible layouts.

- Sets a dark background theme.

4. Header:

- A fixed header with navigation links and a logo.

- Active links are underlined and highlighted in the main color.

5. Home Section:

- Includes a hero image and text content.

- Buttons styled with hover effects.

- Icons and text with consistent spacing and animations.

6. Typing Animation:

- Keyframe animations simulate typing effect for text such as "Frontend Developer", "Web Designer", etc.

7. Education Section:

- Timeline style with dots and animated cards.

- Alternates between left and right for each timeline entry.

8. Services Section:

- Boxes with hover effects to highlight services.

- Responsive design with flexible widths.

9. Skills Section:

- Grid layout to display skills using cards.

- Hover animation to make it interactive.

10. Contact Section:

- Contact form with text inputs and textarea.

- Styled with borders and responsive layout.

11. Footer:

- Contains social icons, navigation links, and credits.

- Maintains consistent dark theme with hover color transitions.

Overall, this CSS code is built for a visually appealing, interactive, and responsive portfolio website.
